<u>Contributions</u>

Malone Ingham - Helped make the initial project and made the README.md file for people to follow along for the project. Created a restriction query for class and spells. Added an add button to the AddPlayerPage so the database gets updated with the info. Fully implemented MyPlayerPage with character displays and the ability to delete or show the character information. Created the PlayerSheetPage to display the characters info. Created the Spells Page to display all spells and every attribute in the table. Created the Race Page to display all races and every attribute in the table. Created the Classes Page to display all classes and every attribute in the table. Created triggers to update all relation tables for players and delete the relation table entries when player is deleted. Added indexes on spell names for quicker lookup of spells. Added a view table on spells for quicker filtering.

Alex Baldauff - Helped with theorizing the database, helped with creating the tables in the SQL database, and helped write the disclosure.

Ian Hoopes - Started implementation of the frontend. Created AddPlayerPage and added all the selection fields to it. Helped group members set up and figure out the UI library we used.

Omar Ndiaye - Helped with the table in the SQL and help with the frontend.
